ABOUT ME

- Tim Steffens - tim.steffens@greenbone.net
- Father & husband
- ~20 years Software Engineering
- Quest
 - ✓ how to build software that "works well"?
- Fan of
 - ✓ clean code, TDD & functional programming
 - ✓ music (Metal)
 - ✓ outdoors & hiking

ABOUT GREENBONE

What sets us apart

Innovation: Leading in cybersecurity with scalable, cutting-edge solutions that identify and mitigate vulnerabilities.

Value Driven Culture: Work environment based on sincere appreciation, honoring individuality

Employee Empowerment: Recognizing our employees as the primary drivers of our success and committing to nurture growth through continuous learning and comprehensive benefits

ABOUT YOU!

- Software Engineer?
 - Testing Engineer?
 - Architect?
 - Project Lead?
 - Non of those?
-
- Worked with test automation?

PLEASE INTERRUPT!

AGENDA

- Setting the Scene
- QA Strategy
- Implementation, Challenges & Learnings
- Outlook

DICE

- Recurring theme in Test Automation: **"the dice"**
 - ✓ AKA **"flaky tests"**
 - ✓ Two runs green, next red - despite no code change ...
- **Who** has already experienced **flaky tests**?

DISCLAIMER

- Out of scope:
 - NFA: Security Testing, Load Testing
 - Code Coverage
 - QA development practices (Pair Programming, Code Reviews)
 - Frontend Unit Tests

SETTING: PRODUCT

TEAM SETUP

SETTING: AGILE

- Agile Approach
 - ✓ **Scrum**
 - ✓ short iterations: **2 week sprints**
 - ✓ **multiple increments** released per sprint
 - ✓ optimized for **fast feedback**

CHALLENGES

- Too few resources to **test** everything **manually**
- Especially **regression**
 - ✓ needs to be repeated **several times a week**
 - ✓ should as **reliable** as possible
 - ✓ reasonable **effort**

THE ANSWER: TEST AUTOMATION

QA STRATEGY

- **automate as much as possible**
- test things on the **right level**
- **code reviews** are mandatory
- in case **manual tests** are needed for regression they must be **well-documented** and easily **reproducible**
- for each **bug** that is found a **test** must be created
- (...)

TEST LEVELS

TEST LEVELS

TEST LEVELS

TEST MATRIX

Use Case	Test Case	Unit Test	BE Service Test	FE Service Test	Full Service Test	e2e Test	manual test
Edit Appliance	edit appliance with missing fingerprint	+ for appliance controller + for appliance service	+ add test case (example test case for failure)	+ add test case (test case stops after receiving the fingerprint)	-	-	-
	edit appliance with correct fingerprint	+ for appliance controller + for appliance service	+ add test case (example test case for success)	+ add test case	-	-	-
	edit appliance with incorrect fingerprint	+ for appliance controller + for appliance service	-	+ add test case (test case stops after receiving the error)	-	-	-
	get appliance where the host key has changed and the fingerprint is no longer valid	+ for appliance controller + for appliance service + for import service(s)	(too difficult to simulate)	+ add test case	-	-	test manually

...

QA STRATEGY

Implementation

- **QA Strategy** workshop per team
- Dedicated **QA Engineer** per team
- **QA CoP**

E2E TEST CHALLENGES

↻ Changing Data ↻ 

- **data** imported from **real systems** changes throughout time
 - ➔ **how many** and **which** entries will be there?

The screenshot shows the Greenbone web interface. On the left is a sidebar with navigation links: Analysis, Dashboard, Assets, Vulnerabilities (highlighted), and Import. The main panel is titled 'Vulnerabilities' and features a 'Match' filter set to 'All'. Below this is a table of vulnerabilities, each with a severity score of 10 (indicated by a red circle) and a descriptive name.

Severity	Name
10	The rexec service is running
10	PHP < 5.2.12 Multiple Vulnerabilities
10	Apache HTTP Server Multiple Security Vulnerabilities
10	Possible Backdoor: Ingreslock
10	Operating System (OS) End of Life (EOL) Detection
10	PHP End of Life (EOL) Detection - Linux
10	Distributed Ruby (dRuby/DRb) Multiple Remote Code Execution
10	Apache HTTP Server End of Life (EOL) Detection - Linux
10	PHP < 5.2.7 Multiple Vulnerabilities
10	phpMyAdmin End of Life (EOL) Detection - Linux
10	ISC BIND End of Life (EOL) Detection - Linux
10	OpenSSL End of Life (EOL) Detection - Linux
10	Mediawiki End of Life (EOL) Detection - Linux
10	Apache Log4j 2.0.x Multiple Vulnerabilities (Windows, Log4Shell)
10	Java RMI Server Insecure Default Configuration RCE Vulnerability
10	Nginx End of Life (EOL) Detection
10	Twig XSS and Command Execution Vulnerabilities
10	MIT Kerberos5 Multiple Integer Underflow Vulnerabilities

The Greenbone logo is visible in the bottom right corner of the interface.

E2E TEST CHALLENGES

↻ Changing Data ↻ 

- data imported from **real systems** throughout time
 - ➔ how many and **which** entries will be
- our approach @ 
 - ➔ **assert** only what **you can know**
 - ➔ validate **structure**

```
35 Cypress.Commands.add("checkNumberOfImportedItems", (page: string) => {
36   cy.enterPage(page)
37   cy.deleteFilterTerms()
38   cy.enterFilterTerm(["Appliance ", "contains", Cypress.env("appliance_name")])
39   cy.waitForStableDOM()
40   cy.get("div[data-testid='pagination-container']", {timeout: 5000})
41     .contains("span", "items")
42     .invoke('text')
43     .then((text) => {
44       const regex = /(\d+) items/;
45       const matches = text.match(regex);
46       if (matches && matches.length === 2) {
47         cy.expect(parseInt(matches[1])).to.be.greaterThan(0)
48       }
49     })
50
51   cy.deleteFilterTerms()
52 })
```

The screenshot shows the Greenbone web interface. On the left is a sidebar with navigation links: Analysis, Dashboard, Assets, Vulnerabilities (highlighted), and Import. The main area is titled 'Vulnerabilities' and shows a table of findings. The table has columns for 'Severity' and 'Name'. Two vulnerabilities are visible: 'The rexec service is running' and 'PHP < 5.2.12 Multiple Vulnerabilities', both with a severity of 10. The Greenbone logo is in the bottom right corner.

22.5	Done	Apr 19, 2024, 06:31:02 AM		⋮

- ⚡ **unique resources** ⚡

➡ e.g. single machine

- possible approaches

➡ provide set and **lend instances to test runs**

➡ write test that **adapt to situation** (e.g. start import if none is running)

E2E TESTS: WRAP-UP

- asynchronism: use **wait for** constructs
- no control of data: **validate structure**, assert what you can know
- parallel runs: **generate entities** with random identifiers, delete them after each run
- keep **test durations** low
 - ➔ e.g. use **API calls** for test setup
- **expect efforts** for maintenance

FE S TEST CHALLENGES

↯ Code Maintainability Decreases ↯

- code may become **difficult to read**
 - ➡ often selectors on the DOM are **not self-explanatory**
- code changes may become **cumbersome**
 - ➡ often **selectors** are **repeated** throughout the code
 - ➡ can be a **lot of effort** to change all locations
- our approach @ 
 - ➡ use **page object pattern**

```
28 it("sorting assets by appliance name should work correctly", () => {
29   cy.contains("h4", "Appliance name").click()
30   cy.waitForStableDOM()
31   cy.get("tbody>tr")
32     .eq(0)
33     .should("contain", Cypress.env("appliance_name"))
34   cy.contains("h4", "Appliance name").click()
35   cy.waitForStableDOM()
36   cy.get("tbody>tr")
37     .eq(0)
38     .should("contain", Cypress.env("appliance_name"))
39 })
40
41 it("sorting assets by last scan should work correctly", () => {
42   cy.contains("h4", "Last scan").click()
43   cy.waitForStableDOM()
44   cy.get("tbody>tr").eq(0).should("contain", "Feb. 07, 2023 08:42:02am")
45   cy.contains("h4", "Last scan").click()
46   cy.waitForStableDOM()
47   cy.get("tbody>tr").eq(0).should("contain", "Feb. 07, 2023 09:36:46am")
48 })
49

FE S TESTS: WRAP-UP

- consider **full service tests** (with backend)
- **mock** systems outside scope (except data stores)
- use **page object** pattern
- set **time zone / locale** explicitly
- like e2e
 - ➔ asynchronism: use **wait for** constructs
 - ➔ keep **test durations** low
 - ➔ **expect efforts** for maintenance

BACKEND SERVICE TESTS

BACKEND SERVICE TESTS

BACKEND SERVICE TESTS

BACKEND SERVICE TESTS

```
98 @fixture.appliance.creation
99 @fixture.appliance.cleanup
100 ► Scenario: Updating an existing appliance with invalid ssh key fingerprint should deliver a 400 status and the expected error (via PUT /appliances/{applianceId})
101     Given the user is logged in
102     And the appliance 'Prepared Test Appliance' is available
103     When the existing appliance 'Prepared Test Appliance' is updated using invalid fingerprint
104     Then a 400 status is delivered
105     And the response has the text 'greenbone/asset/host-key-invalid' for the field 'type'
106     And the response has the text 'SHA256:yyq1KasQ622bc5Ez5nH/fh1Mcse2ZFhewcG4VH3Mir4' for the custom field 'retrievedSshFingerprint'
```

```
36 @step(u'a (?P<status_code>\\d+) status is delivered')
37 def step_check_error_code(context, status_code):
38     wait.wait_for_context_response(context, condition=lambda r: assert_that(r.status_code)
39     .is_equal_to(int(status_code)))
```

BE S TESTS: WRAP-UP

- like frontend service tests:
 - ➔ **mock systems** outside scope (except data stores)
 - ➔ asynchronism: use **wait for** constructs
 - ➔ keep **test durations** low
 - ➔ **expect efforts** for maintenance

OUTLOOK

- Sometimes we get "We detected that the **Electron** Renderer process just **crashed**." in the CI 
 - ➔ we need to investigate
- run e2e test after each deployment
- synchronize QA approach in whole company
- automated cross browser test
- contract driven testing (e.g. pact)
- metrics for quality (e.g. escaped bugs)

EXPLORATORY TESTING

- **Scripted** (espec. automated) **testing is important**
e.g. for regression and possibly short feedback cycles
- But think of your scripted tests as **threads of a net**
- They catch whatever you thought of, but there are always **things** that are **not caught**
- Given the **unlimited space of possibilities** it is impossible to weave the net fine enough to catch every possibility
- This is where **exploratory testing** comes in handy!

<https://www.goodreads.com/book/show/15980494-explore-it>

BEWARE OF THE DICE

don't ignore flaky tests!

Thank You!
